

Data & Analytics – Transforming into a value-driven, convergent space

Anirban Bhattacharya

Practice Head – Data & Analytics – APAC, India (Telecom, Media & Entertainment)

Tech Mahindra

CYBERC SUMMIT 2017

October 2017

Data Explosion – the
peril and the
opportunity

Just a minute!

2017 This Is What Happens In An Internet Minute

That leads us to nothing short of a Data explosion – the reality of today!

43 Trillion

Gigabytes of Data will be created by 2020- 300 times from 2005

2.3 Trillion

Gigabytes of Data is created everyday

> 6 billion people

have cell phones

Stock exchanges capture **TBs of data** per session

Millions of CDRs,

Top-Ups and other events are generated every minute

Almost all modern vehicles have **GPS** enabled

Network connection

per person is going to be >2 for entire world in 2016! Just imaging the population

From Music to medical records, from traffic on roads to social media, our world relies on technology and data- It has to be stored, analyzed and used. These data are huge! And the single term that tries to encompass it is- Big Data. How and what is it?

The type of data depends from Organization & industry. For Telecom network providers, we can consider CDRs, Top-Ups, other events, probe data, NoC, site maintenance etc.

Twitter gets **98,000 tweets** per min

695,000 status updates,

79,364 wall posts and 510,040 comments are published on Facebook per min

600+ videos

are uploaded on YouTube videos per min

Google serves more than **94,445 queries** per min

What is the **probability** that the data is > 80% correct?

Poor DQ cost huge loss- US Economy lost **\$3.1 Trillion a year**

Where has it led us to?

Big Data – a wide canvas

Big Data challenge triggering wide avenues for opportunity and engagement

Data Driven Transformation through a “Data-First” Culture

Capability enhancement, enabling Data Driven Decisioning

Define Platform Arch, establish an Analytics Operating Model

The radical
business-shift

The shift is significant!

How Big is the Digital Universe?

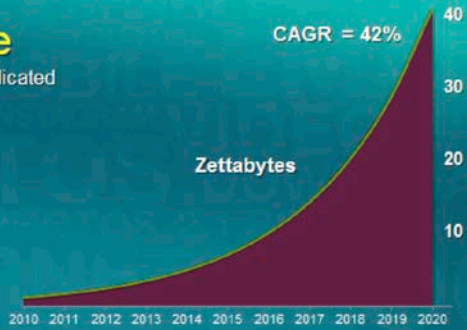

Using the IDC / EMC Study of the Topic

The Digital Universe

The measure of all digital data created, replicated and consumed in a single year

=

40 Zettabytes
in 2020

Source: IDC Digital Universe Study sponsored by EMC, December 2017

Seagate Confidential

“By 2020, 50% of all business analytics software will incorporate prescriptive analytics built on cognitive computing functionality.”

— IDC

New trends in the Telecom space

While they are still relatively niche products, wearables such as smart watches and fitness bands have seen tremendous percentage growth.

The consumer-oriented “things” that comprise the IoT—including wearables, connected cars, smart homes (e.g., lighting, security, entertainment), and the government and **enterprise-connected “things”** such as smart businesses (e.g., fleet management), and smart cities (e.g., parking, city lighting, asset monitoring and tracking, and video security)

Amazon style platform to support an a la carte approach to selling video programming, potentially from a wide range of sources **delivering content to any screen** is finally becoming a reality, enabled by advances in network technology and higher speeds, as well as enhanced content at the carrier level, whether owned or resold

Modernizing Telco Operations with help of Digital Transformation having a huge scope for Automation Cater to incremental demand for Value-added Infrastructure Services

the autonomous vehicle has quickly emerged as a viable and highly desired product for consumers

Smartphone sales are still strong, the highest growth percentages coming in the 45-54 and 55+ age demographics—groups that have previously lagged behind younger consumers due to **Mobile video calling and other multimedia offers**

Telco is a key enabler to other industries for their Digital Transformation through its Digital products & service offerings and differentiated Business Models based on strategic partnerships

A few expected fallouts

How important is Big Data analytics relative to other priorities in your company?

Big Data market is expected to grow from USD 28.65 Billion in 2016 to USD 66.79 Billion by 2021, at a high Compound Annual Growth Rate (CAGR) of 18.45%

Spending on Self-Service Visual Discovery and Data Preparation Market Will Grow 2.5x Faster Than Traditional IT-Controlled Tools

Spending on Cloud-Based BDA Technology Will Grow 4.5x Faster Than Spending for On-Premises Solutions

Big Data, Data Science & Analytics Professional Services will Have a CAGR of 23%

The business asks
of today

What lies beneath and what is sought for – the Big Data asks of today!

What is expected!

A platform integrating internal and external business information

Predictive Analytics enabling strategic decisions

Scalable, extensible, modular and agile

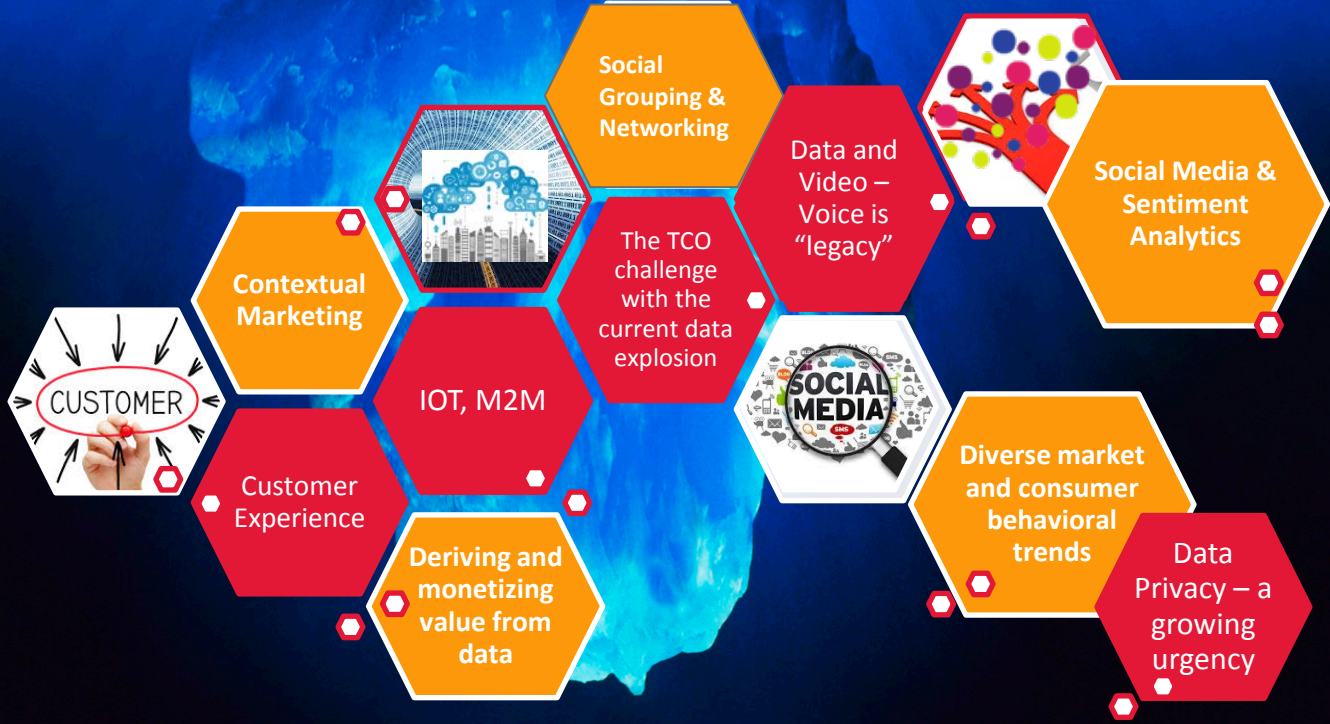

Powered by Self-service & ad-hoc analysis

Enabling effective Campaign Management

Offering a single-version-of-truth of the Customer

Enabling Digital Analytics for the future

Today's business realities and challenges

Big Data and the 4 Vs

Events: Millions of Events, CDRs Get Triggered from OTT Apps, Services & Networks

Event Ranking

Offline process

Anomaly Detection Techniques

- Textual categorization/Time
- Textual similarity and Topology, Knowledge and Recipe
- Neural Net Feedback

Detect Anomalies

Benefits:

- >80 % reduction of actionable items
- Diagnostic Alert narrative

Real time notification by automatic incident creation by integrating with CRM and incident management.

Actionable Intelligence

Using past records, history, create diagnosis for every incident

Prescriptive Analytics

Real-Time action triggering

Automation

Combating the 'V' challenges

Volume

- Network 4g Data storage
- Mobile Data Explosion
- Data increase from xTB to 100xTB
- N/W Alarms and data growing exponentially

Velocity

- Real time alerts
- Real time analytics
- Zero latency reporting

Variety

- Alerts and Logs
- Sensors and Devices
- Machine-generated communications and transactional activity

Challenge

- Increased cost of Operation
- Requirement of diverse Technology array
- Ecosystem maturity
- Demand for new age requirements/Use cases

Moving towards a
'converged' BI
landscape

Storage capacities of hard drives have increased massively over the years (Moore's law), but access speeds—the rate at which data can be read from drives (or written to drives) — have not kept up *in comparison to Storage Capacity*.

❖ For Example:

- One typical drive from 1990 could store 1,370 MB of data and had a typical transfer speed of 4.4 MB/s, so you could read all the data from a full drive in around five minutes.
- 20 years later, one terabyte drives are the norm, but the transfer speed is around 100 MB/s, so it takes more than two and a half hours to read all the data off the disk.

Unfortunately, a rather long time to READ all data on a single drive—and writing is even slower!!

Solution? Obviously Parallel Processing!!

- ❖ Most of these models use commodity hardware and hence were developed to address the issues of hardware failure and combining input / output from multiple discs. The most popular one is Hadoop as on date.
 - **The distributed storage is provided by HDFS**
 - **The analysis is provided by Map-Reduce.**
 - **It has a Distributed Data Storage and Distributed Data Processing Framework that handles petabytes of Data in limited time**

In April 2008, Hadoop broke a world record to become the fastest system to sort a terabyte of data - Running on a 910 node cluster, Hadoop sorted one terabyte in 209 seconds!!

Increasing significance of 'analysis' across the business-chain

Technology focused offerings with focus on enabling our clients to become *Insights-Powered, Data-Driven Enterprises*

Using some of the latest technologies & Platforms With an intention to drive value with '*Cultivating advanced Analytics*' theme

Business focused offerings with specialized and pointed use-cases for customers across various process streams

Focus is to deliver business value harvesting our experiences, domain knowledge and Platforms
